

PROTEINLOOP tank

Off-grid AI for living protein systems

Gemma 4 | DECT NR+ | Deterministic safety

Simulate water emergency

AGENTIC AI CONTROL

Gemma configured

Live recovery mission

Mission

Recover water quality

Recover water quality

Reduce ammonia and restore dissolved oxygen while protecting fish and prawn survival.

5-agent team

Safety verifier

Human approval

Run agent team

ONE LOOP, SHARED RISK

A chemistry failure does not stop at the vegetables.

Fish and prawns breathe the water. Plants clean it. Duckweed stores feed. Eggs depend on what survives upstream.

One ammonia spike

can threaten every protein output in the loop.

A living system people can understand in seconds.

The deployed operator view connects animal behavior, plain-language chemistry, biomass, and action in one scene.

The model can recommend. It cannot mutate.

Authority moves left to right. Every connector ends at an explicit decision boundary.

Safety is demonstrated, not narrated.

The simulator is simultaneously the product demo, the policy evaluator, and the RLVR source of truth.

ONE-CLICK JUDGE PROOF

Inject emergency -> block unsafe proposal -> admit safe recovery -> inspect measured chemistry

An on-site AMD GPU can keep the decision loop local.

After the application and Gemma weights are provisioned, farm decisions do not require an internet API.

Risky actions stop for a human decision.

The producer sees the proposed change, safety result, and current chemistry before choosing what happens next.

No irreversible action runs silently.

Verifier feedback turns 10% first-pass safety into 100%.

Exact verifier failures return as bounded feedback; every revision is parsed and verified again.

CAPTURED AMD RUNTIME

Gemma 4 E2B

- PyTorch 2.10 · ROCm 7.2
- vLLM 0.20.2 · gfx1100
- 47.98 GiB AMD GPU memory

20-EMERGENCY REPAIR

18 repairs · zero fallback

- 2/20 first answers safe
- 17 repaired once · 1 twice
- 20/20 model-safe · no weight update

MEASURED EXECUTION

139 requests

- 60,385 observed tokens
- 99.793 completion tokens/s
- p50 latency · 655.522 ms

420.648 kg aggregate scenario biomass · +221.7244 mean reward vs naive

Protect protein production where connectivity cannot be assumed.

A verifier-gated, producer-controlled platform for rural farms, cooperatives, and food-security programs.

PRIVATE FIELD LINK	Two physical nRF9151 radios
LOCAL INTELLIGENCE	Self-hosted Gemma 4
EXECUTABLE SAFETY	Deterministic verifier + RLVR
